

HOLY HOME SCHOOL SHAHNEWAZPUR TARAIYA, SARAN

WELCOME TO THE TEST GUYS

Q1) How is valency is different from valence electron ? (2)

Q2) make the structure of CH_4 and tell whether it forms covalent or ionic bond ? also write a basic difference between ionic bond and covalent bond (3)

Q3) Explain why aluminium loose three electron instead of gaining five electron ? (1)

Q4) what is the statement of octet rule (1)

Q5)How maxwell theory proof rutherford theory is fail ? and also explain how rutherford proof nucleus is very dense (4)

Q6)why bohr atomic theory is considered as best among all theory and also explain what is the limitation of dalton and thomson (4)

Q7)As we all know gold is very expensive metal still rutherford uses it he can use any metal but he only use despite being the fact that gold is very expensive (2)

Q8) consider yourself as a scientist of older times and if government said you to discover more about atom then tell me what procedure would you use to discover more about it ? (4)

Q9) Suppose yourself as a teacher of class 9 and you have to teach about electronic configuration and atomic number and isotope and isobar then how will you teach so that you get positive feedback from all the student (6)

Q10) Explain in detail about rutherford model of atom and also make diagram and write the name of all the equipments used by him along with their roles and write all the postulates that rutherford said while explaining its own model (6)

Q11) At last rate the question (gave me the exact idea about whats your thought regarding this question) i need honest review (1)

SHORT ANSWER TYPE QUESTION ALONG WITH NEGATIVE MARKING 1:4

Q1) Write the valency, valence electron and electronic configuration of sulphur, chlorine, calcium, oxygen, fluorine (10)

_____ Best of luck hope you do well _____
